Scope of Work as Landscape Designer

Inputs from client to start the work

1. To provide plan with Green area marked for proposed landscape area which is in tune with completion certificate.
2. To provide norms for designing (like compliance as per Industrial area or Green building certification)
3. To provide detailed requirements for aspects like water body, recreation areas, pathways and or all requirements which client intend to incorporate in landscape area.
4. To provide additional inputs like, location of water source which is required for designing of irrigation system.
5. All information related to availability of soil, water & murrum.
6. To provide information which has to be considered as do and donts in designing. Like if food industry will not allow to plant fruit trees to keep birds away.

After receipt of above information, we provide below deliverables

1. Optional layouts taking into considerations aspects of soft scape, hard scape & water scape. These aspects also consider requirements towards completion certifications.
2. After finalisation of layout considering major inputs of client, preparation of final layout.
3. Based on final layout, providing material options with combinations of soft scape & hard scape. (in forms of photographs or actual material)
4. Providing approximate budgets with 2-3 combinations to arrive at approximate final layout with budget.
5. Preparation of presentation drawings to have final design with final budget.
6. Preparation of Bill of Quantities.
7. Providing estimate based on Bill of Quantities.
8. Preparation of detailed working drawings and information about material to be used for entire scope of work for soft scape, hard scape, water body, civil work & irrigation system.
9. Preparation of tender documents.
10. After offering work by client to competent contractors, explaining the projects & drawings at site.
11. Based on work order terms, providing service of partial supervision to ensure quality of work executions.

Till now we have completed more than 50 industrial, 25 Residential, 15 Commercial, 5 Hospitality & few more spaces.

Irrigation Plan

The premises is in the rainy area. It is already running factory which is established more than 15 years ago. Plantation done at that time was excellent & has flourished very well. The company has their own horticulturist. The client came up with an idea to prepare layout at their end and asked us to design in newer ways with liberty to design with our own thought process of areas of soft scape, Civil works & water scape.

The project is under IGBC. So norms has to be followed. The area had multiple levels including lower ground level, higher ground level & terrace. The selection of plants had to be great as they were bore of existing plants as they have been seeing for long duration. The client was very much keep to utilise terrace on regular basis.

Since it is industrial landscape we had to design with balance of cost aspect and IGBC norms. We had reduced use of hard scape & incorporated shrubs & ground cover more. We have selected partially less water requiring plants, yet should have beauty of either colours, fragrance, leaves or trimming shape. We had sectorial used plants, like bands of colours, fragrance of spices, levels of plants, cutting shaping with height variations etc. There was beautiful run off of rain water which we have given path through arranged boulders water body to give natural look. We have provided few areas which are externally placed which were originally designed to be indoor. Like seatings in reception areas, which are generally indoor, we had given option to seat outside.

Owners we highly keep to utilise the terrace in best possible ways. Again designing had to be sustainable. We have designed several seating areas for individual , multiple & as auditorium. These were below trees, under pergola etc. Longer but small in areas water body is designed to have live element on terrace.

This was the project which was challenged at all stages by horticulturist (Selection of plants), existing staff (for newer look), minimising use of natural resources like hard scape, water for irrigation.

Landscape Designing Hospitality Projects

A L D S

**ARVIKA LANDSCAPE DESIGNS
SOLUTIONS PVT. LTD.**

**An ISO 9000:2015
Certified Company**

This is a prestigious project of Welcome heritage group at famous Tiger reservoir Tadoba in Chandrapur District Maharashtra. Its is adjacent to water reservoir where siting of Tigers is highly possible.

The project is beautifully designed by Ar. Ashfaque Ahmed (Nagpur Maharashtra). He has put forth his experience in designing the project. The challenge in designing is the climactic conditions in Tadoba. Temperature reaches 47 degree Celsius in peak summer. Major amenity areas are open & no air conditioning was done to give rustic but classic feel of the resort.

Our role was to make the area completely green with aspect of minimum water requirement for landscape area. We have incorporated large size trees which gives shade and again has to be native to enure wild life presence in resort & needs lesser water. We have used shrubs which attracts butterflies & birds. To enhance mood of guests colour ful & fragrant flowering plants were used which can be utilised at Spa and flower decorations. Fruit trees & vegetable gardens are designed to provide guest best quality fruits & food. Large royal palm trees are designed to give feel of tropical & rural areas which are ideal for any resort.

Water body is created to give Live water element. Lotus pond is designed on either sides of entrance to reception to give feel of rural areas. Grill restaurant which is air condition free and is completely open area, is surrounded by water trench which has fish & is beautifully lite to give special mood in evening times.

Lastly each cottage has its own garden in the back yard to enjoy the resort fullest.
